

Nur Efendi

nur.efendi2505@gmail.com | (+62) 822 4344 3485 | Yogyakarta, Indonesia

Experienced Backend Engineer with 5+ years in building scalable backend systems using Java Spring Boot, Go, and Quarkus. Proven track record in designing scalable, high-performance systems, integrating third-party services, and implementing microservice architectures. Passionate about clean code, high-performance systems, and continuous learning. Open to remote opportunities and international collaboration.

TECH STACK

- Languages: Java, Go, PHP, Python
- Frameworks: Spring Framework, Spring WebFlux, Quarkus, GO Fiber, GO Gin, Echo, Laravel, Odoo
- Databases: MySQL, PostgreSQL, MariaDB, MongoDB, Redis
- Tools & Platforms: Docker, Kafka, Google pub/sub, Git, Postman
- Concepts: RESTful, Microservices, Clean Architecture, CI/CD

WORK EXPERIENCE

Backend Developer

PT Cerdas Digital Nusantara (cakap.com)

September 2019 - present

- Actively supported Cakap's backend transformation as a key team member, contributing to a **27% improvement in team velocity and top-tier performance recognition in 2024, 2025**.
- Oversaw project timelines and resource planning to ensure on-time delivery; improved team throughput by **57%** and helped achieve a **top-2 performance ranking in 2023**.
- Revamped the payment infrastructure, reducing server resource consumption by **75%** and minimizing processing load by **99%**.
- Implemented Redis caching for frequently accessed endpoints, resulting in significantly faster response times and reduced database load.
- Refactored legacy systems into modular microservices, optimized database queries **reducing query load by 60%**.
- Led the migration of legacy monolithic APIs to a microservices architecture, improving modularity, scalability, and ease of maintenance.

Lecturer

NURUL HUDA University

September 2023 - April 2025

- Deliver lectures on Visual Programming, Data Structures, and Object-Oriented Programming for undergraduate students in the Informatics program.
- Design interactive course materials and assignments to enhance student engagement and comprehension.
- Provide academic mentorship and support to students, including guidance on final projects and career development in software engineering.

Sr. Backend Developer

IFG Life

January 2023 - April 2023

- Developed a Java Quarkus-based validation service to dynamically process and verify API payloads against configurable business rules and database schemas, improving data integrity and reducing input errors.
- Integrated Apache Kafka to enable scalable event-driven architecture for inter-service communication and asynchronous processing.
- Designed and implemented secure RESTful APIs for internal systems and third-party services, with a strong focus on performance, error handling, and maintainability.

Full Stack Developer

Circle Labs

September 2018 - August 2019

- Designed, developed, and maintained dynamic web applications using PHP (CodeIgniter) for internal and client-facing solutions.
- Created and optimized relational database schemas to support custom business logic and application workflows.
- Worked closely with clients to gather requirements, propose solutions, and ensure that delivered products aligned with their operational goals.
- Deployed and supported production systems for small and medium enterprises, including on-site implementations and basic server configurations.

EDUCATION

AMIKOM University, Yogyakarta

Bachelor's Degree in Informatics Technology

September 2015 - April 2018

- Deliver user-focused designs that highlight product and brand characteristics
- Communicate data-informed vision and design rationale
- Output project: MoLelang (e-commerce and bid application)

LANGUAGES

- Indonesian: Native
- English: Professional Working Proficiency

CERTIFICATE & AWARD

Competency Certification

Developer

April 2020
